Connect Your Uniden Products to Uniden Voice

You already know Uniden for the dash cam in the ute, the cameras on the shed and the UHF in the truck. Here is every product in the range that connects to the internet, what it connects to, and what changes when the phone system on.

The Uniden range has quietly become a connected range. App Cam SOLO X2K wire-free solar cameras, the SOLO X2K Bell video doorbell, a 4G pan-and-tilt camera that needs no Wi-Fi at all, indoor App Cams with two-way talk, iGO CAM and Dash View dash cams with Wi-Fi and GPS, XTRAK smart UHF radios that pair to a phone over Bluetooth for location sharing, and the **EVOC2 SIP desk phone** – the one product in the range that connects *directly* to Uniden Voice. Most of these are separate systems that share a brand rather than a single login, and this article is honest about which is which. What you actually get from consolidating is one Australian support relationship instead of five, one warranty path, one supplier for procurement, free seven-day rolling cloud backup on the SOLO cameras, and a phone system on the desk that comes from the same company as the camera on the shed.

■ The short version

Product	Connects via	Why a business cares
iGO CAM 90	Wi-Fi to phone	4K (2160p) front camera, 135° capture angle, 3.16" widescreen display, microSD to 128GB. Wi-Fi transfer means the driver pulls the clip off on the side of the road rather than driving.
Dash View 60+	Wi-Fi + GPS	5K Ultra HD with GPS, so the footage carries speed and location data. That is often the detail that settles a dispute rather than prolonging it.
Dash View 40R	Wi-Fi + GPS	Front and rear coverage with GPS. The rear camera is the one that matters for the most common commercial claim, being hit from behind while stationary.
iGO PLAY 10+	Wireless CarPlay / Android Auto	Adds a wireless CarPlay and Android Auto screen to an older work vehicle. Relevant here because it puts hands-free calling into a ute that never had it, including calls placed through.

Also worth knowing

Product	What it needs	App / platform	Business use
Uniden EVOC2 desk phone	Ethernet with PoE, or Wi-Fi via USB dongle	✓ Uniden Voice, direct	The desk phone. Auto-provisioned from the Uniden Voice portal.
App Cam SOLO X2K (1/2/4 packs)	Wi-Fi	My Uniden+	Wire-free 2K yard, entry and perimeter cameras. Solar compatible.
SOLO X2K PT Kit	Wi-Fi + included solar panel	My Uniden+	355° pan and tilt from one mounting point.
SOLO X2K 4G PT Kit	4G SIM , no Wi-Fi required	My Uniden+	Remote sites, gates, properties, unconnected jobs.
SOLO X2K Bell	Wi-Fi	My Uniden+	Wire-free video doorbell with chime. Trade counters, back gates.
App Cam X24 / X24B	Wi-Fi	My Uniden+	Indoor with two-way talk. Reception, stockroom, back of house.
App Cam X25PT	Wi-Fi	My Uniden+	Indoor 2K with automatic motion tracking.

Voice assistant control

The App Cam range works with Google Home and Amazon Alexa, so a camera feed can be thrown onto a screen with a voice command. In a business that is mostly a novelty, but in a retail back office or a workshop where nobody has clean hands, it is occasionally the fastest way to check the front door.

Questions the full guide answers

- ☐ Which Uniden products connect to the internet?
- ☐ Do Uniden cameras integrate with the Uniden Voice phone system?
- ☐ What is the best Uniden camera for a business site with no internet?
- ☐ Can I use a Uniden dash cam and Uniden Voice together for business calls in the car?
- ☐ What is the difference between XTRAK UHF radios and a cloud phone system?
- ☐ Does buying everything from one brand actually save money?
- ☐ Where should a business start if it wants to consolidate onto Uniden?

This is the summary. The guide has the detail.

Every point above is worked through in full on our site, with the Australian context, the numbers and the exceptions. If you would rather talk it through, call **1300 881 662** or visit **unidenvoice.com/get-started**.
